

\*  $mx - 2$

$-mx - 2$  negative margin

\*  $space - x - y$  add space between elements horizontally  
↓  
eg: in list for navbar  
will be applied from the second element

\*  $ctrl + space$  (to get suggestions in Tailwind)

# Square Bracket Notation.

now one can use any arbitrary value for margin, padding, etc.

eg:  $mx - [4px]$

# Responsiveness

$640$   $768$   $1024$   $1280$   $1536$   
 $sm$ ,  $md$ ,  $lg$ ,  $xl$ ,  $2xl$   $\Rightarrow$  Breakpoints of styling  
\* min width

start with the smallest screen and then add breakpoints

$display: block$  /  $lg: block$

to display the elements as block level

: hidden (to not show the element)
