

- \* `display: inline-block;`
- \* `float: right | left`
- \* `position: static (default)`
- \* `position: absolute; top: 100px; (works in accordance to the parent)`

if  
1  
2  
3  
4  
that changes to 1 2 3 4

- \* `position: relative; top: 100px; (works on the initial position / relative position)`

- \* `position: fixed; bottom: 10px; right: 10px; (will not change its place e.g.`

- \* `position: sticky (used mostly for navbars: will stick to the position)`

(when we reach a certain place [like top] it will be stuck.)

## # Flex

- \* always mention `display: flex` in the parent element
- \* `flex-direction: row | row-reverse | column | column-reverse`

1 2 3 4	4 3 2 1	1 2 3 4	4 3 2 1
---------	---------	---------	---------
- \* `justify-content: flex-start | flex-end | center`

1 2 3 4	1 2 3 4	1 2 3 4	1 2 3 4
---------	---------	---------	---------
- \* align works horizontally
- \* justify works vertically
- \* `flex-wrap: wrap (just like word wrap)`
- \* `gap`
